

EDITORIAL

The aim of the Senologic International Society (SIS) – as it is shown in its by-laws - is to gather the Scientific Societies, Associations and Groups from all over the world. Their objective is to promote the knowledge in Biology and Medicine with the purpose of collaborating in prevention, diagnose, treatment and research of breast diseases. Since 1976, when it was founded, it has developed a non-stop activity closely linked to train professionals devoted to this benign, as well as, malignant disease.

The Spanish Society of Senology and Breast Disease (SESPM), since 1980, has got around more than one thousand members. It is one of the most active members of SIS and it has the same objectives. It has a web site and a scientific journal which are its way of expression. In this sense SESPM develops Training Courses, Symposiums, and Creation of Consensus and collaborate in different publications about breast health and its pathology for the different specialists that make it up. At this time SESPM has the pleasure to host the 16th SIS World Congress. This means gathering during some days professionals with the highest scientific level in the world who collaborate in the attendance, teaching and research about breast health.

In this event the newest information about the last advances in Senology, will be concentrated and available.

All the aspects that make up this speciality are included on them. This set of criteria will make possible its multi-disciplinary approach.

SIS (www.sisbreast.org) has realised Congresses in Shanghai, Boston, Zagreb, Houston and other big cities of the world, and SESPM (www.sespm.es) in different Spanish cities during thirty years. We welcome now Valencia where the next Congress will be held on the 20th to 22nd October. This city will gather all Societies, meaning a big opportunity of acquisition and updating the last scientific advances. It is expected about more than one thousand two hundred attendants. A sample of the content of this Congress is the list of big topics that is shown here.

V. Guillem Porta
President of the National Scientific Committee

C. Vázquez Albaladejo
*President of the Congress
SIS-SESPM President*
